Learn some basic bash shell scripts for installing, running, and maintaining Oracle databases on Linux. The installation of software, monitoring of system resources, and management of systems involve repetitive and error-prone tasks are better addressed through automated processes than manual procedures. Time is money There are other good answers that spread light on the technical reasons to write modularly a script, potentially long, developed in a working environment, developed to be used by a group of persons and not only for your own use. It's something that I very much enjoy. Scripts are either called as part of an automated process with no human intervention or run interactively, with a user responding to prompts. In functions you can keep some variables local, which increases reliability decreasing the chance of things getting messed up. Exercise: Interactive Scripting.

Having implemented a couple of minor tricks to help prevent "unintentionals" you consider global variables as those that have to be within

function's environment, then it makes sense to make them capital.
