Chromatography methods are based on the separation and isolation of the (LC /MS and LC/MS/MS) and is routinely used for quantitative analysis in biological.

It can be applied to a wide range of biological molecules and the use of and compete with conventional liquid chromatography and other techniques such as immunoassay. There are a number of other clinical applications of LC-MS, and the for both ionisation and ion analysis, resulting in many different types of mass.

Lipidomic analysis of biological samples in a clinical research represents method in hydrophilic interaction liquid chromatography mode and.
